PROFESSIONAL EXPERIENCE

Blackshark.Ai

Graz, Austria

Python Developer

May 2025 – April 2026

- Scaled customer processing capacity **10x** by implementing a glob-based workflow file filtering system, enabling batch-processing of thousands of files per request and drastically reducing system overhead.
- **Doubled** billable customer resource usage by architecting and developing a secure, role-based Public API key system, successfully eliminating manual UI processing bottlenecks
- Drove a **20%** increase in system usage by engineering a Directed Acyclic Graph (DAG) task scheduling system to orchestrate and execute complex inference workflows, boosting job processing reliability
- Enabled flexible subscription-based monetization by implementing granular storage and pixel usage quotas, giving administrators finer control over resource consumption and enforcement.

Cactus Communications

Mumbai, India

Software Engineer

May 2022 – May 2025

- Achieved a **98% reduction** in API response time by transitioning from threading to asyncio to optimize asynchronous processing and enhancing backend storage efficiency through the migration from S3 to AWS EFS.
- Developed and maintained Titan, an extraction tool for PDF, DOCX, and LaTeX files, serving as the backbone of Paperpal and supporting over **one million** users.
- Reduced response time of api by 50% by shifting monolithic docxto-pdf service to microservice architecture.
- Migrated CloudWatch dashboards to Grafana, enhancing monitoring capabilities and providing more flexible visualization options.
- Utilized AWS CloudWatch metrics and Sentry error monitoring to proactively pinpoint and resolve complex system lag and performance bottlenecks, reducing application crashes by **50%**.
- Achieved **100% system availability** by developing a timeout management solution by integrating AWS SQS as a Dead Letter Queue with AWS Lambda.

Wellowise

Delhi, India

Full Stack Developer (*Part-time*)

Oct 2019 – Jan 2022

- Reduced report generation timeline from **1 week to 3 hours** through the successful implementation of an automated process that retrieves data from the backend, renders it into HTML, and converts it into PDF format.
- Increased Security of microservices by Developing a Gateway API with JWT Authentication, integrating **8 microservices** into a single unified Gateway API using Flask, PyJWT, and Django.
- Designed an AngularJS-based admin frontend web app, with backend in Django to view and update patient records which reduced record updation time by **60%**.

AWARDS & ACHIEVEMENTS

- Won **Delivery Champion of the quarter** award based on Apr-Jun 2024 performance
- Won **Team of the year** award for "Team Paperpal"(Jun 2024).
- Won **Project of the Year** award for "Generative Features & Copilot Launch"(Jun 2024).
- Won **Project of the Quarter** award for "Paperpal Copilot"(Sep 2023).
- Secured **2nd** position in GCP GenAI Buildathon(Oct 2023).
- Secured **2nd** position in the Dyson Datathon(Oct 2022).

SKILLS

Programming Languages: Python, JavaScript, Java, C++

Cloud Technologies: AWS Lambda, ECS, EC2, Fargate, SQS, S3, Terraform, GCP Cloud Functions

Libraries & Frameworks: FastAPI, Kubernetes, Flask, Docker, Grafana, Kibana, Django, Jenkins

Databases: PostgreSQL, DynamoDb, MySql, Elasticsearch, Redis

EDUCATION

Indraprastha Institute of Information Technology(IIT)

Delhi, India

B.Tech. in Computer Science and Applied Mathematics

Aug 2018 – Sep 2022

With Minor in Computational Biology
